

Operate with

air

Systems for your  
convenience  
**with unique  
5050 AM/RL**

It will  
**change your mind**

Sometimes it just happens. You come across ideas that will make your life much easier. And before you know it, you don't even remember how you managed without it.

Ringfeder's new air operated coupling, 5050 AM/RL, is all that and much more. By using the existing air in the truck, you will open the coupling in no time.

No more unnecessary long stops .

**Ringfeder's 5050 AM/RL gives you the convenience of a reliable and simple solution!**

# It's time for the next generation!

You recognise the situation – you're trying to uncouple the trailer from your truck, but the coupling pin just won't come away from the draw bar eye. Before you're ready to drive off you've spent both time and effort trying to position your trailer to make it happen.

Now, fortunately this familiar situation belongs to the past and we believe the time has come to leave the old times behind. With Ringfeder's unique coupling, 5050 AM/RL, you will use the existing air in the truck and before you know it, you're ready to go.

## It couldn't be easier!

# let the air do the work!

**With Ringfeder new unique coupling, 5050 AM/RL, you will uncouple your trailer in no time. And it is easy. Just insert the air hose to the trailer air supply and the air will do the work for you.**

## **This is how it works:**

To open Ringfeder 5050 AM/RL, remove the air hose from the holder and insert it into the trailer air supply. Once it's done, the air will stream into the AM mechanism and release the coupling pin, with a power of 3kN.

If the coupling pin won't come away at your first attempt, just

go back to your vehicle, and slightly move the trailer eye to release the tension. When the pin has found the right position it will open up. It is important that you remove the air hose from the trailer air supply and put it back in its holder since the vehicle should not be driven with the air hose connected to the trailer air supply.

## An all-round solution

Ringfeder 5050 AM/RL is compatible with all types of couplings:

Duomatic

C-coupling

Palm

# quality systems

to take you anywhere

By the end of 2014 new EC legislation will create a single market with common standards for type approval in all European countries. As a contractor, this will naturally affect your business but we believe you can make the new legislation, ECWVTA (EC Whole Vehicle Type Approval), work to your advantage.

The ECWVTA is quite simple – no approval – no business!

With Ringfeder products and systems you do not need to worry. All Ringfeder products have the same high quality and reliability as you can expect and they are already type approved.

In other words – Ringfeder's systems mean less hassle and more business.

# Ringfeder - let's work together

The advantage of using Ringfeder's coupling system is that all products work together. All parts are developed and manufactured with exceptional demands of quality, reliability, and not to say the least – cost effectiveness. With Ringfeder's coupling system you will get type approved products, tested with our own high requirements of safety and performance.

Our high standards of quality are not only important for our products, but also when it comes to our customer service. We always listen when you're in need of a helping hand.

## We never let go

Safety is a matter of experience. Since the establishment of Ringfeder GmbH in 1922 stands the brand Ringfeder in the world of the commercial vehicle technology for absolute safety and reliability.

Ringfeder offers reliable and innovative products – and much more. More service and more support. A dense dealer network and experienced specialist consultants provide at home and abroad for competent consultancy and service.

The brand Ringfeder stands worldwide for professional top technology and guarantees a maximum of service, quality and reliability.
